

TRAILS TEAM REPORT – Parks and Commons Commission – June 6, 2023

Trails –

Mud and decaying wood chips have been removed from the steps at the east end of the GBP Public Trail and replaced with gravel.

64' of 4 x 10 PT headers have been installed along parts of the Amanda Trail.

Recent readings of trail counters on the Ya'Xaik and Amanda Trails indicate that year-to-date average daily walkers on those trails is 12 and 24 respectively.

YIPSI–

In much of the area immediately south of the library, weed cloth has been put down and covered with 15 yd³ of wood chips. After approximately two years of light deprivation, it is hoped that all the existing invasive plants will have met their demises and, after removal of the weed cloth and wood chips, the area will be planted with native species.

As plants wake up from the winter, ongoing trimming and removal of invasives continue.

Highway 101 delineators – Rumor has it that ODOT and the City have reached an agreement about the details of this project and how it will be funded.

804 Trail South – The number of broken or missing delineators is now >5 creating a less-than-well-cared-for look between 2nd and 7th Streets. Some discussion about how to effect the currently needed repairs as well as inevitable future repairs seems overdue.
