

TO DETERMINE BUILDING HEIGHT

“Height of building” means the vertical distance from the average finished grade to the highest point of the building plus any fill above the natural grade.

Step 1. Calculate the average height for each side of structure.

X = tallest building height

Y = shortest building height

$(X + Y) / 2 = \text{Average height (H)}$

Step 2. Add together the height for each side and divide by the number of sides.

$$\frac{H_1 + H_2 + H_3 + H_4}{4} = \text{average building height}$$
